

Gartner Recognizes Capsenta as a 2016 Cool Vendor in Data Integration and Data Quality

Vendors selected for the Cool Vendor report are innovative, impactful and intriguing.

Austin, Texas – May 23, 2016 – Capsenta, Inc., today announced that it has been recognized as a Gartner Cool Vendor in Data Integration and Data Quality for 2016.¹ Capsenta's enterprise data platform significantly reduces the time to results for data integration and search projects using advanced graph representation and semantic technologies. The platform enables rapid, comprehensive access and precise insights to an organization's data assets. Analytics leaders quickly obtain the insight they seek by searching and reporting across multiple, disparate data sources simultaneously, all while referencing an intuitive, business-familiar data model.

According to Gartner, "data integration capabilities are at the heart of Gartner's Information Capabilities Framework and will power the frictionless sharing of data across all organizational and system boundaries."

"It is a distinct honor to be named a Gartner Cool Vendor," said Wayne Heideman, Capsenta CEO. "Our customers are looking to transition from being reactive and stale in the manner they analyze data to proactive, delivering real-time insight on which their businesses can take immediate action. It is our goal to quickly deliver value with a solution that is 'best-in-class', flexible to our customers' strategic data needs, and ideal for those who no longer want to invest the significant time and money required with traditional ETL-based data warehouse strategies."

Among Capsenta's positive references is collaboration with The Ohio State University Wexner Medical Center to identify advanced heart failure patients that may require a life-saving technology called a Ventricular Assist Device (VAD). This project, headed by Dr. Sitaramesh Emani is utilizing Capsenta's Ultrawrap to virtually integrate and search large sets of disparate data to identify these critical patients that otherwise would have been missed. "The opportunities to more easily and efficiently identify these patients are profound. We can save thousands of lives every year through the right data intelligence capabilities." says Dr. Emani.

About Capsenta

Capsenta is the first and only company using advanced graph representation and semantic technologies to virtually integrate and search complex and diverse data sources (both internal and external). Capsenta's enterprise data platform delivers the world's fastest path to insight (search, query and reporting). The original, patented technology was invented by the company's founders at the University of Texas at Austin. Utilizing Linked Data concepts and leveraging a host of W3C standards, it intelligently virtualizes structured, semi-structured, and unstructured data sources independent of type, location, and number of sources. Capsenta was founded in 2012 and is a spin out of the Department of Computer Science at the University of Texas at Austin.
